Overview

Natural language processing (NLP) is a branch of artificial intelligence that deals with computational approaches used to process text.

Human language (i.e., natural language) is inherently ambiguous. Ambiguity resolution using computational techniques is at the heart of NLP. As a result, the advancements in NLP can be visualized as three generations: rule-based, statistical and neural. The course introduces the three generations of NLP through the philosophy of ambiguity resolution being the core task of NLP. The content covers different NLP sub-problems (such as POS tagging, sentiment classification, named entity recognition, machine translation and summarisation), and typical approaches in the three generations to tackle these sub-problems.

With recent advancements in large language models, there has been a renewed interest in NLP from industry and research alike. However, NLP precedes large language models. The exposition of NLP centered around ambiguity resolution helps to develop an understanding of the past and the present of NLP.

Conditions for Enrolment

Prerequisite: COMP9414 or COMP9814

Equivalent Courses

Course WENG6001

WENG6001 - Natural Language Processing (Bengaluru)

Delivery

In-person - Standard (usually weekly or fortnightly)

Delivery Mode In-person

Delivery Format Standard (usually weekly or fortnightly)

Indicative Contact Hours 5

Please note that the above delivery information is an indication on how this course may be delivered within the year. Delivery mode(s) for each term can be viewed on other sources such as myUNSW and class timetable site.

This Handbook is a comprehensive catalogue of our offerings and includes courses that can be taken to satisfy program requirements irrespective as to their availability for a particular year. Availability of courses is best checked using filters on this site or on the class timetable site.
