Overview

Neural networks and deep learning play a critical role in pushing the boundaries of what AI can achieve, making them indispensable for various industries and applications. Their ability to learn and adapt from data has revolutionised many fields and opened up new opportunities for solving complex problems. This course provides an introduction to and deep exploration of neural networks and deep learning principles and practice.

Topics chosen from: perceptrons, feedforward neural networks, backpropagation, deep convolutional networks, image processing; geometric analysis of trained networks; recurrent networks, language processing, semantic analysis, long short term memory; deep reinforcement learning; autoencoders, generative models, adversarial training; designing successful applications of neural networks; recent developments in neural networks and deep learning.

Conditions for Enrolment

Prerequisite: COMP9021

Equivalent Courses

Course WENG6004
WENG6004 - Neural Networks and Deep Learning (Bengaluru)

Course ZZEN9444
ZZEN9444 - Neural Networks, Deep Learning

Exclusion Courses

Course COMP9844
COMP9844 - Extended Neural Networks and Deep Learning

Delivery

Collapse all

In-person - Standard (usually weekly or fortnightly)

Delivery Mode In-person

Delivery Format Standard (usually weekly or fortnightly)

Indicative Contact Hours 4

Please note that the above delivery information is an indication on how this course may be delivered within the year. Delivery mode(s) for each term can be viewed on other sources such as myUNSW and class timetable site.

This Handbook is a comprehensive catalogue of our offerings and includes courses that can be taken to satisfy program requirements irrespective as to their availability for a particular year. Availability of courses is best checked using filters on this site or on the class timetable site.
