Subject description

This subject explores narrative and visualisation techniques to make data more understandable and engaging. You'll learn to visualise various data types, from medical to historical, using tools to uncover new insights. You'll practice communicating these insights to diverse audiences, refining your ability to tell compelling data stories and justify your findings. Through this, you'll enhance your skills in presenting data phenomena persuasively and confidently.

Notes

This subject requires attendance at the evening sessions, which form important parts of assessed work.

Availabilities

Click on Select availability in the top right of screen and choose from the location, attendance mode and session options.

Learning outcomes

Collapse all

Upon completion of this subject, graduates will be able to:

1. Justify the selection and analysis of data as the basis for 'data narratives' for different stakeholders.
2. Apply a range of visualisation and narrative techniques to a variety of data types.
3. Justify the selection of narrative tools and techniques to illuminate critical aspects of problems.
4. Justify and communicate 'data narratives' to stakeholders from a range of industries and contexts drawing on relevant data patterns and analyses.

Learning and teaching activities

Online Preparation and Assignments: from the pre-semester Preparation and Orientation weeks to the end of the subject students will be completing online activities that are designed to prepare them for intensive activities on campus. A range of online media applications will be used to provide specific resources and activities that students complete before coming to each on-campus session.

Interactive face-to-face sessions: Dynamic and interactive face-to-face sessions will include in-class exercises and presentations that provide opportunities to develop innovative practice suited to data science contexts and industry professionals. Presentation and discussion formats involve introductions to innovative practice and tools as well as critical debate and reflection of learning in context. Guest speakers and industry experts will be partners in the program.

Professional Development Portfolio: Portfolio thinking will continue to frame students' curation, consolidation and communication of evidence of their learning and development of graduate attributes and their professional evolution. The portfolio environment provides a key platform for building an individual professional narrative, as well as personal reflection upon and integration of visualisation and 'story-telling' work done in class and in teams. Students will be developing their personal 'toolkit' of visualisation and narrative strategies and tools within their portfolio. Regular feedback opportunities from peers and the teaching team are built into class sessions, assignments and online activities.
